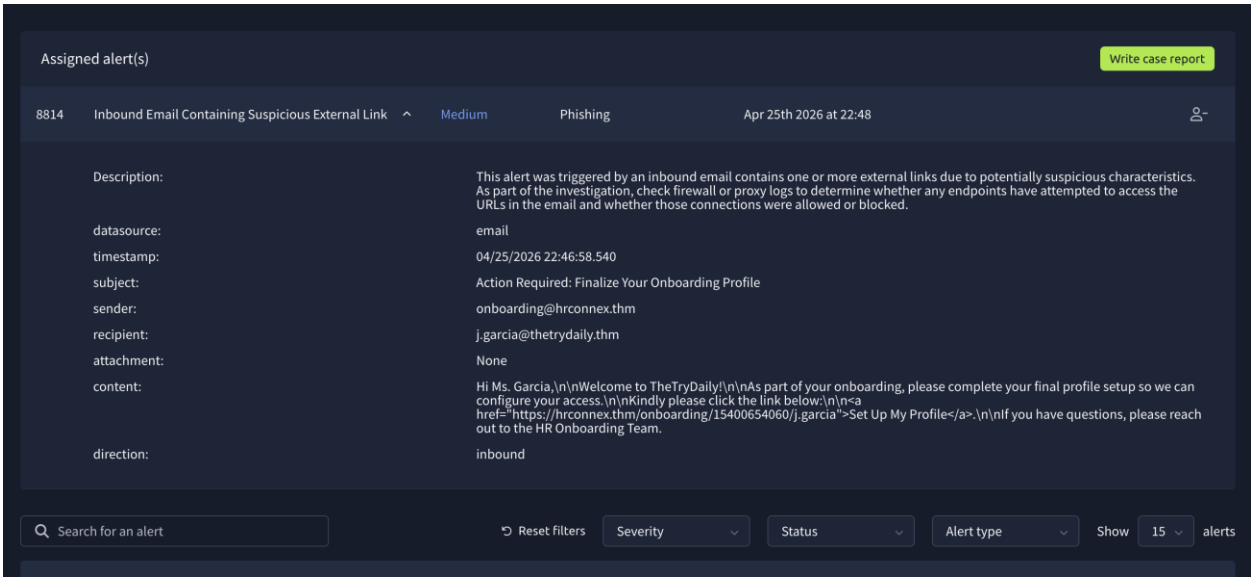
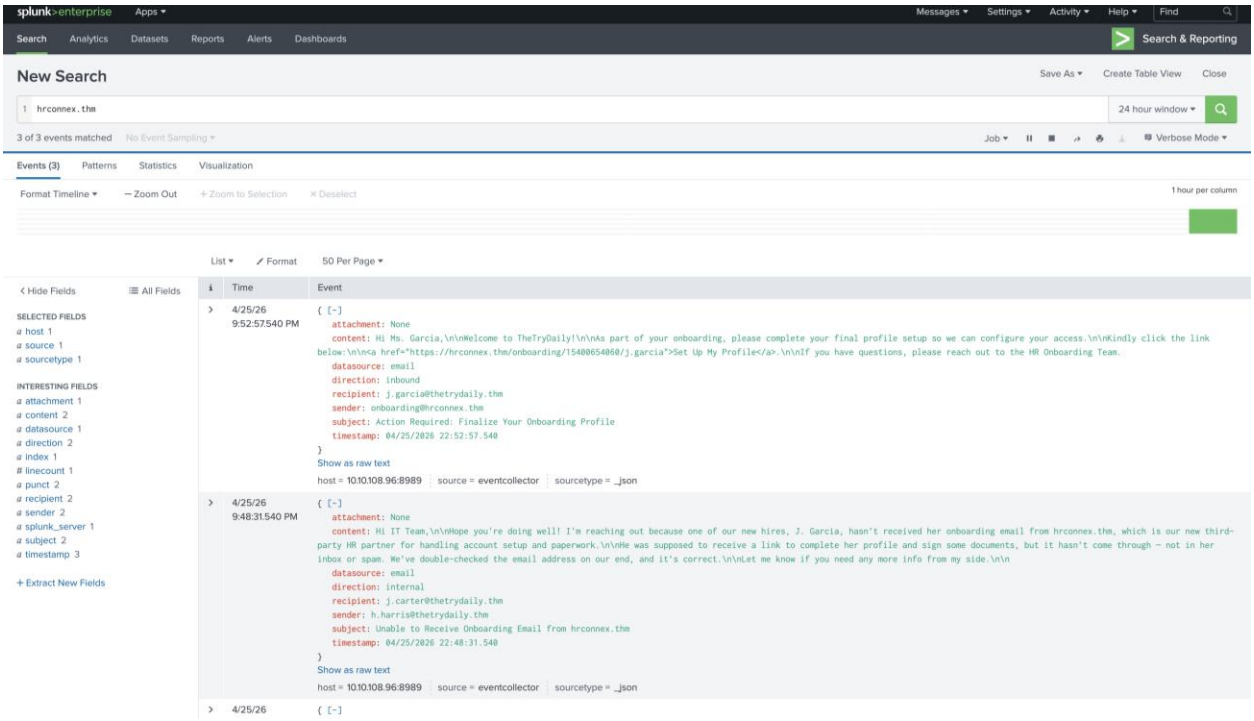
Lab: Introduction to Phishing

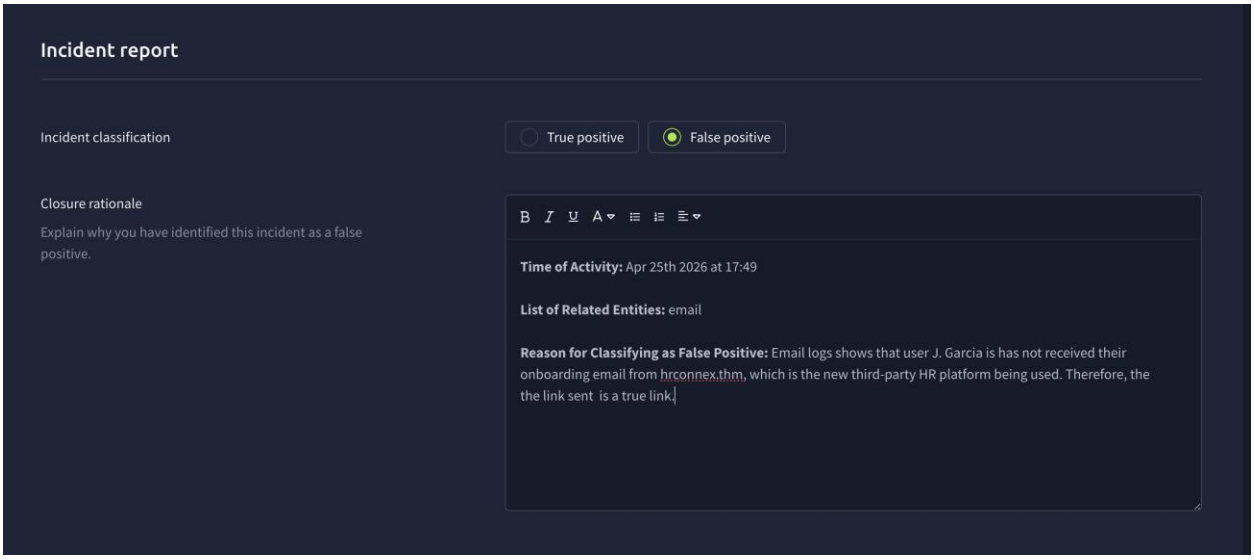
Description: Phishing Simulation within TryHackMe that details step-by-step processes of escalating/closing tickets.

Tools: TryHackMe, Splunk

1) This is a false positive. The inbound email is from a third-party HR platform that is being used by the organization. We can identify this when we search for the attached link within Splunk. We can also see that the HR team is emailing the IT team because user J. Garcia has not yet received onboarding instructions from the third-party vendor despite them sending instructions.







2) This is a true positive. This email seems to be emulating Amazon. We can identify that this is phishing email as the sender cannot be recognized/seems to copy

Amazon emails, there is a sense of urgency within the tone of the email, and most significantly when we further investigate this link within virus total, it shows as being phishing as per phishing database. This link was already blocked by the firewall, so no further escalation needed, but the user may need to be re-educated on phishing.

8815	Inbound Email Containing Suspicious External Link	Medium	Phishing	Apr 25th 2026 at 22:52

Description:	This alert was triggered by an inbound email contains one or more external links due to potentially suspicious characteristics. As part of the investigation, check firewall or proxy logs to determine whether any endpoints have attempted to access the URLs in the email and whether those connections were allowed or blocked.
datasource:	email
timestamp:	04/25/2026 22:50:11.540
subject:	Your Amazon Package Couldn't Be Delivered – Action Required
sender:	urgents@amazon.biz
recipient:	h.harris@thetrydaily.thm
attachment:	None
content:	Dear Customer,\n\nWe were unable to deliver your package due to an incomplete address.\n\nPlease confirm your shipping information by clicking the link below:\n\nhttp://bit.ly/3sHkX3da12340\n\nIf we don't hear from you within 48 hours, your package will be returned to sender.\n\nThank you,\n\nAmazon Delivery

Incident report

Incident classification

- [x] True positive
- [ ] False positive

Case report

Please write a detailed report on the steps taken to analyse and contain this incident, including all relevant information and the rationale for its closure.

Time of activity: 04/25/2026 22:50:11.540

List of Affected Entities:

Reason for Classifying as True Positive: Sender is tying to emulate Amazon. When analyzing link on virustotal, the url is identified as phishing from a phishing database.

Reason for Escalating the Alert: The link has already been blocked by the firewall.

Recommended Remediation Actions: Educate user on phishing links.

List of Attack Indicators: unrecognized sender, sender is emulating Amazon, emails has a tone of urgency, link is classified as phishing by virus total

Does this alert require escalation?

- [ ] Yes
- [x] No

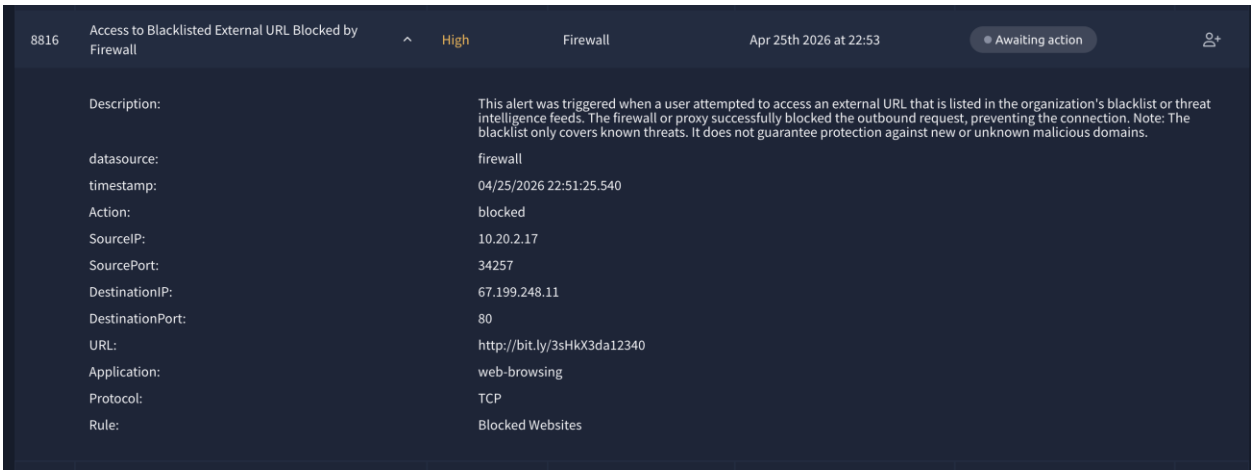
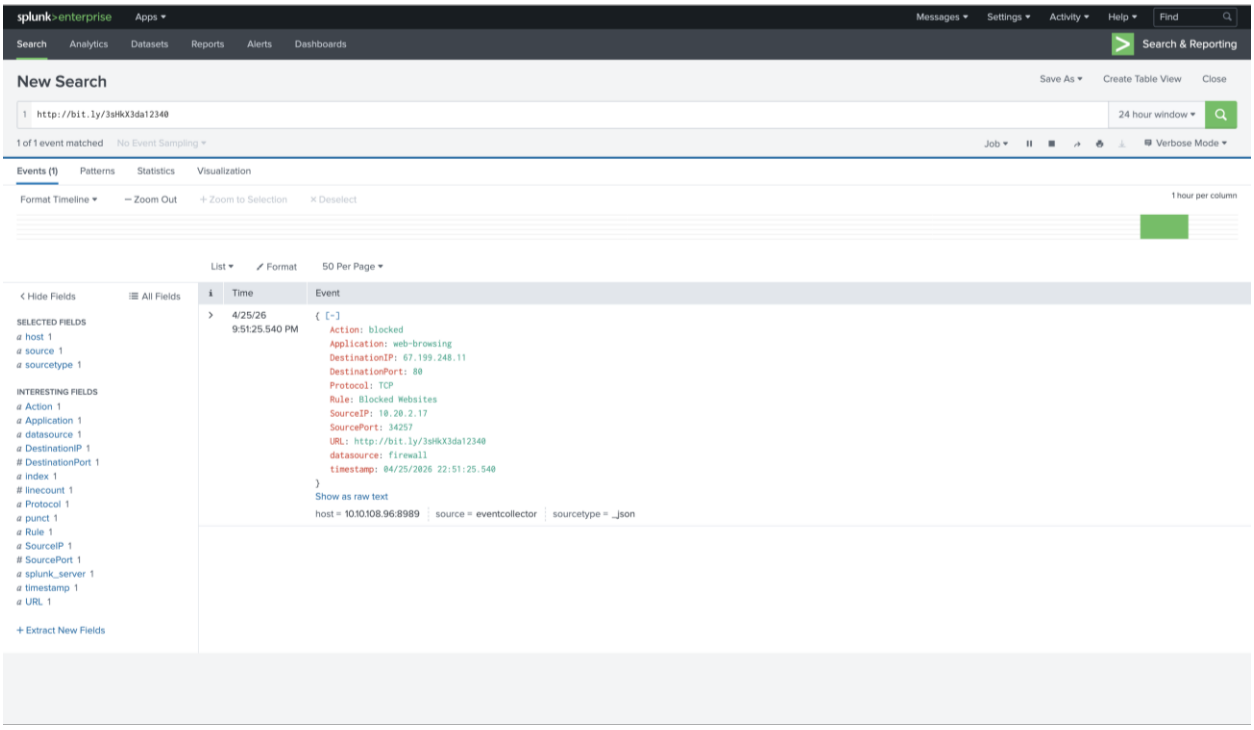
3) This alert aligns with the previous one. Escalating, so this can be used for fine tuning blocking.





4) This is a true positive. The email is typo-squatting as phishing. There is a sense of urgency within the tone of the email. When we query this link on Splunk, we see that the user has unfortunately accessed this link, and the link was not automatically blocked by the firewall. The user's account will need to be locked and reset now that the password to the account has been compromised. Additionally, this domain/IP address will need to be blocked to prevent access to this link in the future.
