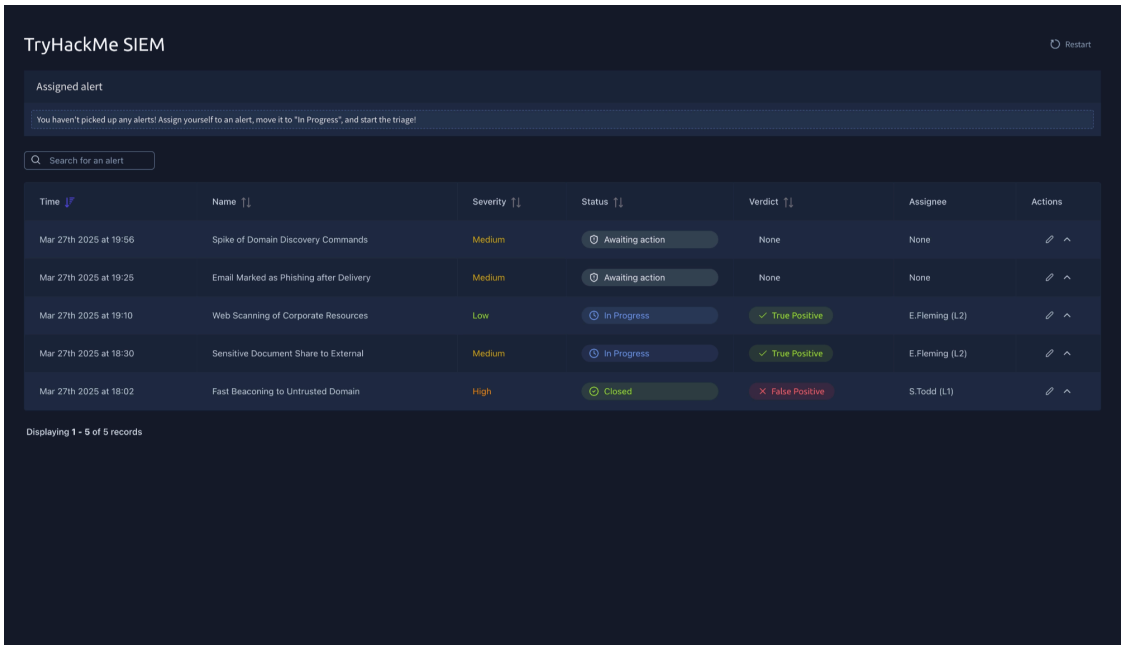
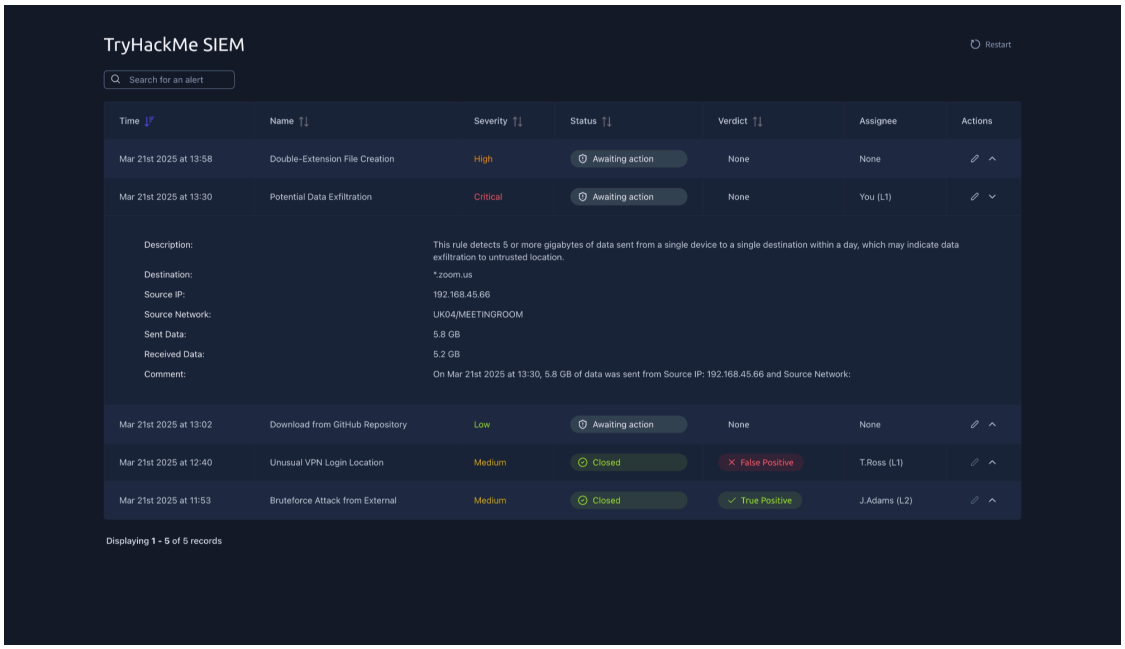
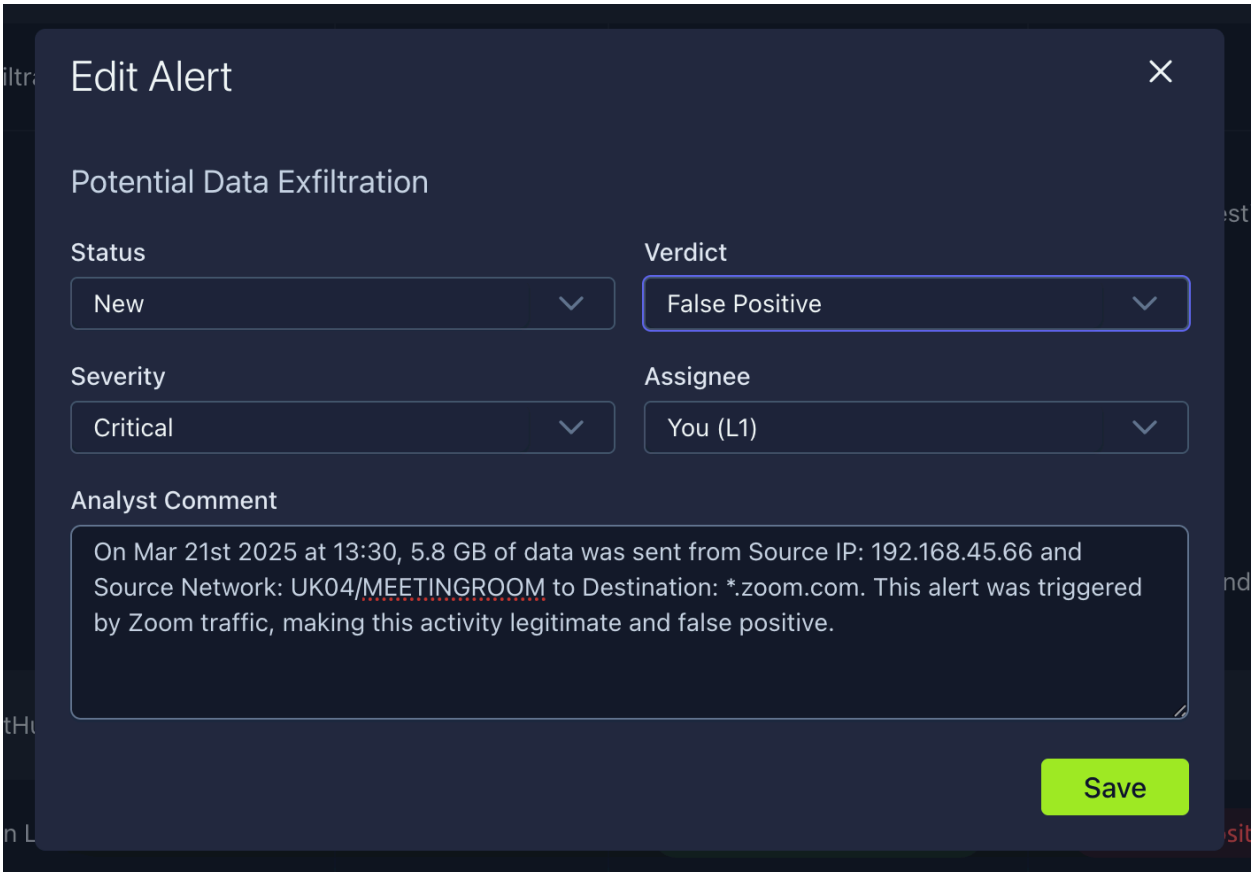
SOC Alert Triage

This a alert triage simulation.



Picked up the first critical alert, as it is important to work through alerts based on high severity and and the older alert. It is significant to start with major alerts as they could cause more impact. Once the alert with the highest severities are identifies, it is significant to then pick the the oldest alert. The idea is that if both alerts are about two breaches, the hacker from the older breach is likely already dumping your data, while the "newcomer" has just started the discovery.





Now we triage the alert with the second highest severity.

Double-Extension File Creation
High
Awaiting action
None
None
Description:
This rule detects a creation of a double-extension file like '*.pdf.exe' or '*.gif.lnk', often used by hackers in phishing attacks to trick users into opening the malicious executable.
Host:
LPT-HR-009
Process Name:
chrome.exe
Process User:
S.Conway
Target File:
C:\Users\S.Conway\Downloads\cats2025.mp4.exe
File MotW:
https://freecatvideoshd.monster/cats2025.mp4.exe
File MD5:
14d8486f3f63875ef93cfd240c5dc10b
